KIENE wheel pullers (the Wheel Grabber and Wheel Whiz) are the proven, safe way to remove a seized wheel.

Now with the addition of the K-1356 Brake Drum Puller, both tools have become the safe way to remove a seized 16-1/2” brake drum.

Using a large hammer to release a frozen drum may cause damage to the drum and the mechanic.

The K-1356 Brake Drum Puller gives you the option of re-using both!

Adjusting screws (two on top, one at the bottom) keep the puller centered on drum

Welded Steel Construction

Three chain assemblies provide even pulling force

Safety and Cost Savings from KIENE
